

## Features

### HIGH CURRENT CARRY AND HIGH VOLTAGE

Inert gas filled arc chamber suitable for high voltage switching

### COMPACT STRUCTURE, LOW NOISE

Small, low-profile design with low noise while carrying or switching loads

### SAFE FOR EXPLOSIVE ENVIRONMENTS

No arc leakage due to a hermetically sealed design

### HIGH RELIABILITY DESIGN

Hermetic sealing creates a stable environment for high voltage switching

### NO SPECIFIC MOUNTING ARRANGEMENT

Mountable in any orientation without reduction of performance

### VARIOUS APPLICATIONS

Battery disconnect, EV charging, energy storage systems, photovoltaics, power control, circuit protection and much more

## Sealing Type: Epoxy/Resin

- ✓ Compact design, pre-charge contactor

## Certification Information

1. Meet RoHS (2011/65/EU)
2. CE certified
3. UL Approved

## Nomenclature

ASEV30

B

-

### Series code:

"ASEV30" = ASEV30

### Coil Voltage Code:

"B" = 12VDC

"C" = 24VDC

### Options (applied in this order):

Blank = Std. Options (Bottom Mount, Without Aux)

**Product Data Sheet**

**MAIN CONTACT**

Contact Arrangement	1 Form X (SPST-NO)	
Rated Operating Voltage	12-900VDC	
Continuous (Carry)Current	30A*1	
Short term	50A (3 minutes) *2	
Max Short Circuit Current	1,250A (1/2 cycle, 60Hz) (through closed contacts)	
Dielectric Withstanding Voltage (initial)	Between Open Contacts	5,600Vrms/8,000VDC
	Between Contacts to Coil	2,200Vrms/4,000VDC
Insulation Resistance (initial)	Terminal to Terminal	New: Min 100 M $\Omega$ @500VDC End of life: Min 50 M $\Omega$ @500VDC
	Terminals to Coil	
Contact Voltage Drop	(@30A), $\leq$ 60mV	

**OPERATE / RELEASE TIME**

Operate Time Close (includes bounce)	25ms, Max. @20°C
Release Time	10ms, Ma x @20°C

**ENVIRONMENTAL DATA**

Shock, 11ms ½ sine, operating	20G Peak
Vibration, Sine, Peak, 20G	55 to 2000Hz
Operating Temperature	-40 to +85°C
Altitude	<4000m
Weight	0.28 Lb (0.13 kg)
Noise (@100mm)	70dB(a)

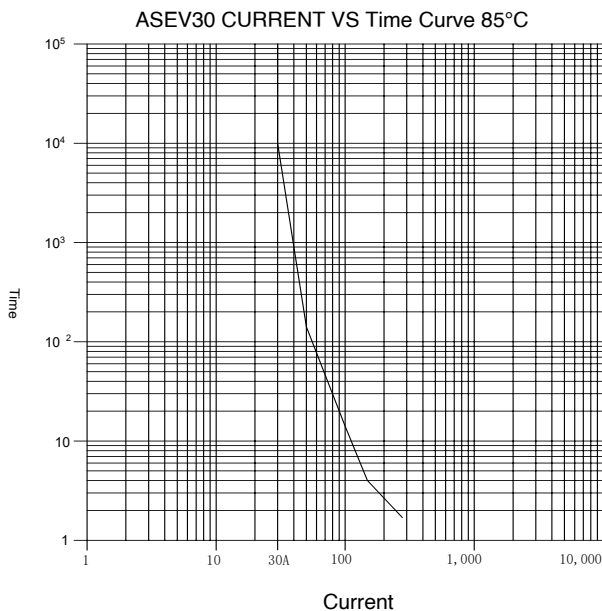

**EXPECTED LIFE**

Electrical Life (make/ break) 30A @+450VDC	10,000 Cycles
Electrical Life (make/ break) 30A @+750VDC	4,000 Cycles
Mechanical Life	200,000 Cycles

**COIL DATA**

Nominal Voltage	12VDC	24VDC
Pickup voltage (25°C)	8VDC	18VDC
Max. Pick-up Voltage (85°C)	9.6VDC	19VDC
Drop-out Voltage (25°C)	1.2VDC	2.4VDC
Rated coil resistance $\pm$ 5% (25°C)	25 $\Omega$	92 $\Omega$
Coil current (25°C)	480mA	260mA
Coil watts (25°C)	6.0W	6.0W

**Current Carry Curve**

Note:

- 1: Current is relevant to the cross-sectional area of contactor
- 2: Ambient temperature: +40°C, 3 minutes

Outline Dimensions : inches (mm)

\*Note: The wire size is 22 AWG.

## Application Notes

1. Be sure to use split washers to prevent nuts from loosening, all the terminals or conductors must be in direct contact with the contactor's terminals. Nut tightening torque is specified below. Exceeding the maximum torque can lead to product failure.
  - Contact torque: 30 - 40 lb. in (3.4 - 4.5 N.m)
  - Mounting torque: 20 lb. in (2.3 N.m)
2. Contact terminals are polarized so refer to drawing during connecting. We suggest using a varistor rather than diode as a surge protector.
3. Do not use if dropped.
4. Avoid installing in a strong magnetic field (close to a transformer or magnet), or near a heat source.
5. Electrical life:  
Use per load capability and life cycle limits so as not to cause a function failure (treat the contactor as a product with specified life and replace it when necessary). It is possible to make parts burn around the contactor once operating failure occurs. It is necessary to take layout into account and to make sure power shall be cut off within 1 second.
6. Lifetime of internal gas diffusion:  
The contactor is sealed and filled with gas, lifetime of gas diffusion is determined by temperature in contact chamber (ambient temperature + temperature generated by contact operation). Operate only in an ambient temperature from -40 to +85 °C.
7. Coil drive power must be greater than coil power or it will reduce performance capability.
8. Avoid debris or oil contamination on the main terminals to optimize contact and avoid excess heat generation.
9. After continuous rated voltage / current has been applied to the coil and contacts, turning off the coil and immediately re-energizing the coil will result in a higher pick-up voltage than the rated value. This is due to increased coil resistance (coil temperature rise) of the device.
10. It is impossible to determine all the performance parameters of relays in each specific application area, therefore, customers should choose the products according to their own conditions of use. If in doubt, contact Altran. The customer will responsible for what they chosen it is the user's responsibility to determine
11. Altran Magnetics reserves the right to make product changes. Customers should reconfirm the contents of the specification before first orders and ask for us to supply a new specification if necessary.
