Solid State Relay

ASR-SJM Series Single Phase DC

- MOSFET Output
- Low Impedance
- 4-32VDC Control Input
- Load Current: 10A-50A
- Internal Over-voltage Protection
- LED Indicator
- RoHS Compliant

Product Description

The SJM series industrial single phase relay with MOSFET output is widely used in industrial applications. The relay can be used for resistive, inductive, or capacitive load, and features low impedance. The control voltage range is 4-32VDC, and the relay has internal over-voltage protection. The load current can be rated at 10A, 20A, or up to 50A, depending on the specific model

Wiring Diagram

When the relay is used for inductive load control, please be sure to use a suppression circuit, just like the drawing above. Both load terminals are inverse parallelled with a fly-wheel diode D1.

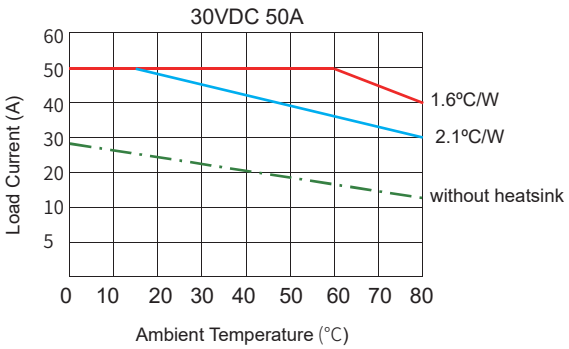
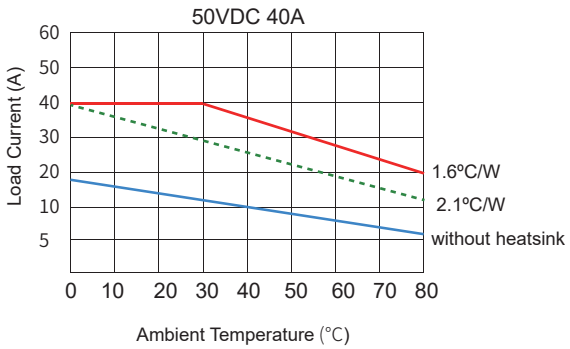
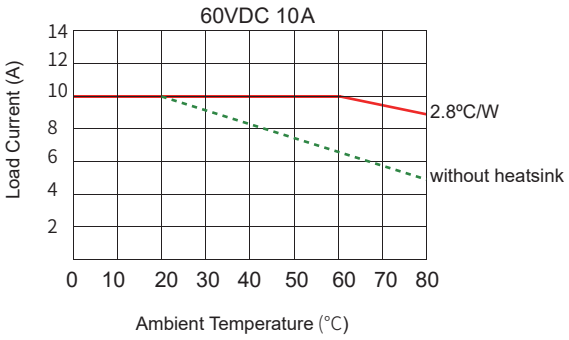
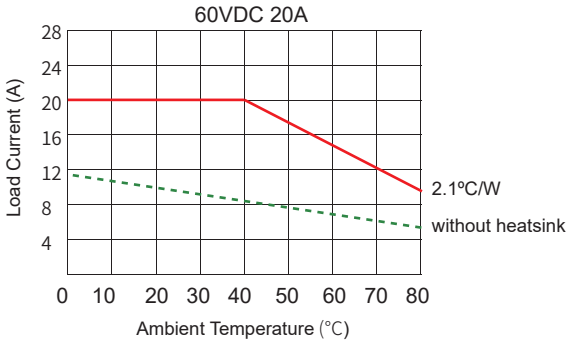
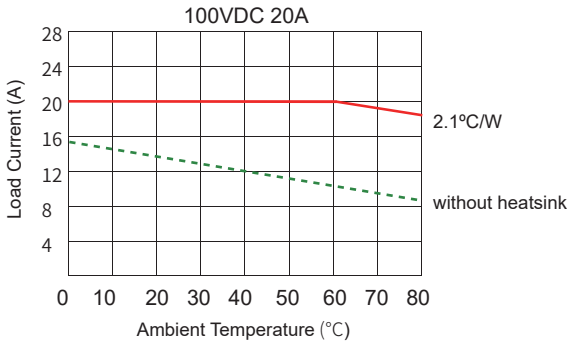
Thermal Curve

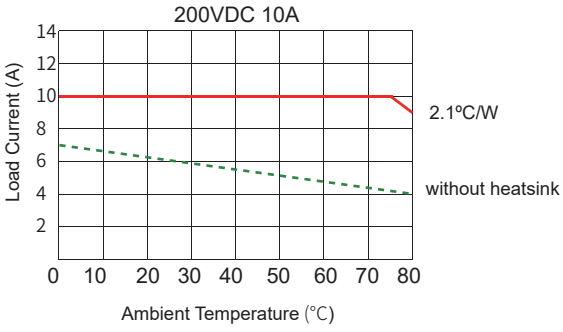












Important Notice

1. Relay must be mounted to proper sized beat sink based on thermal curves. Thermal grease or a thermal pad must be used between relay and heat sink and be torqued down to (13-15)/(1.5-1.7) in-lb/Nm.
2. When connection wiring to SSR, please ensure screws are torqued down properly. Recommended torque for input screw is (13-15)/(1.5-1.7) in-lb/Nm, output screw is (13-15)/(1.5-1.7) in-lb/Nm.
3. SSR's carrying load capacity is related to the operation ambient temperature and heat dissipation condition, please refer to the Thermal Derating Curve for derating.
4. Capacitive load will produce very high surge current at the moment of conduction, which may lead to the damage of solid state relay due to the excessive surge current. Therefore, if the actual load is capacitive, or the load has parallelled large capacitance, it is strongly recommended that NTC should be connected in series in the load loop to suppress surge current in order to avoid damage to the product.
